

A Creative Maths Y6/7 Poster Competition

Mathematics is a creative subject – professional mathematicians will agree that they need to be imaginative in order to succeed in their work.

In our Y6/7 summer competition Miss Clarke wants you to make a poster aimed at showing people how there is a connection between maths and an arts subject such as music, art or dance.

For example, your poster could focus on:

- Maths and art
- Maths and dance
- Maths and music
- Maths and drama or theatre
 - Maths and film
- Maths and architecture
 - Maths and textiles
 - Maths and sculpture
 - Maths and origami

Poster instructions/criteria:

- Your poster should focus on the connection between maths and an aspect of the arts.
- It sounds obvious, but your poster should be a poster – i.e. it doesn't need to contain lots and lots of words, it needs to be visually eye catching and should give out a strong message.
 - You can draw your poster by hand; use a computer; or a mixture of both.

Hand in your posters in the new term to Miss Clarke (Numeracy Co-ordinator).

Our winner and runner up will receive a prize!
