

The aim of the course is to develop knowledge and understanding of core Biological concepts. Students will develop an awareness of advances in technology related to Biology. The ability to apply biological knowledge in different contexts will allow students to be able to make sense of news items relating to biology and medicine, while investigations help to bring a greater understanding of how scientists interact with each other in making use of new discoveries.

Biology Curriculum Map

"Biology sometimes reveals its fundamental principles through what may seem at first to be arcane and bizarre." Elizabeth Blackburn, biologist and Nobel Laureate
